Summary:

- I am a product-oriented full-stack developer with 5 years of experience developing projects and building startup products. I have practical experience in building, deploying, and managing full-stack systems using technologies such as React, Next.js, Node.js, PostgreSQL, Python, and C++.
- I am passionate about learning new technologies and solving real-world problems. I am also a strong team collaborator with a continuous learning mindset. I enjoy working with others, taking responsibility for challenging tasks, and contributing to a win-win environment where both the company and I can grow together.

Work experience:

Autonomous Vehicle System Level 3 Research — BFMC

Role:	Project Manager - AI Engineer
Team Size:	7
Tech Scope:	Python, C++, Computer Vision, AI Model Development, Real-time Processing
Project Description:	• Developed an autonomous vehicle system in collaboration with Bosch, aiming to research and implement advanced autonomous driving capabilities for a scaled smart vehicle platform. • Worked on real-time processing problems involving lane following, traffic situations, obstacle handling, and smart mobility scenarios. • Participated in Bosch Future Mobility Challenge 2024 and 2025, reaching Top 15 Worldwide.

Pharmaceutical QC Defect Detection Machine — VCP Pharmaceutical JSC

Role:	Project Manager
Team Size:	4
Tech Scope:	Python, C++, Deep Learning, Object Detection, Industrial Camera, Edge AI
Impact:	Optimized the medicine inspection workflow and generated approximately \$11,000 USD in business value.
Project Description:	• Designed and developed a computer vision system to inspect blister packs and detect visual defects, deformities, and abnormal product conditions. • Integrated camera input, image preprocessing, model inference, result classification, and reporting into a production-oriented workflow. • Optimized the manual inspection process, improving QC efficiency and reducing operational dependency on human checking.

Work experience:

YI-OneClick CRM / AI Workflow Platform

Role:	Founder, Product Builder, Full Stack Developer
Team Size:	6
Tech Scope:	React, Next.js, Node.js, PostgreSQL, AI Workflow
Project Description:	• Founded and developed YI-OneClick CRM, a product initiative focused on helping small and medium-sized businesses manage leads, customers, deals, quotes, and automation workflows through a simple product-first interface. • Built full-stack product prototypes covering lead management, contacts, deals, quotes, and business workflow automation. • Focused on prebuilt workflow templates that allow businesses to deploy automation faster without heavy customization.

Maritime VMS Management System — Starlink Maritime Connectivity

Role:	Full Stack Developer
Team Size:	3
Tech Scope:	React, Next.js, Node.js, PostgreSQL, REST API
Impact:	Optimized operational workflow by reducing manual effort in monitoring vessel connectivity, tracking bandwidth usage, and managing onboard devices. Contributed to approximately 60% improvement in operational efficiency by streamlining bandwidth tracking, device management, and monitoring workflows.
Project Description:	• Developed a maritime vessel management system focused on connectivity monitoring, bandwidth control, GPS tracking, and operational visibility for vessels using satellite internet infrastructure. • Designed backend services for managing vessel data, connectivity status, user access, and system logs. • Worked on real-time or near-real-time data visualization for maritime operations. • Contributed to a system aligned with maritime satellite connectivity use cases such as Starlink Maritime, fleet management, and remote vessel monitoring.

Tech Skills:

Programming language:	JavaScript, TypeScript, Python, C++, C#, SQL
Frontend Development:	React, Next.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design
Backend:	Node.js, REST API, Authentication, API Integration
Database:	PostgreSQL, MySQL, Supabase, MS SQL Server, MySQL
Tools:	Git, GitHub, Docker, Vercel, Postman, Figma
Certificates:	<u>Certificates obtained</u>
Soft Skills:	• Project management • Elevator Pitch • Business communication • Problem solving • Teamwork

About myself:

- Passionate about product development, continuous learning, and transforming ideas into practical software systems.
- Founder and product developer of early-stage projects such as YI-OneClick CRM and Snow AI Companion, focusing on AI-based workflows, child-safe interaction design, and practical product development.
- Able to work through challenging problems with persistence, ownership, and a strong belief that difficult work creates valuable learning, even when the outcome is not perfect.
- Outside of work, I enjoy reading, exploring new technologies, and taking quiet time to reflect on my work and improve my thinking. Some of my favorite books include Clean Code, Head First Design Patterns, Working Effectively with Legacy Code, The Pragmatic Programmer, The Lean Startup, Zero to One, Elon Musk, and The Alchemist.

Goal:

- I aim to contribute to meaningful products that create real value for users and businesses. I want to work in a win-win environment where I can bring value through ownership, execution, and continuous improvement, while growing my technical, product, and leadership skills.
- I want to build products that are not only technically strong but also useful, scalable, and valuable to people.
- My long-term goal is to become a product-oriented engineer who can solve real problems, think from first principles, and help turn ambitious ideas into practical, reliable software systems.
